

Replacador

Replication for Windows Deduplication EXECUTIVE OVERVIEW

Replacador

The Affordable Replication Solution for Windows

ESSENTIALS

- Automatically replicates data to locations of your choice
- Works with any host system that can be connected to a Windows server
- Works with built-in Windows 2012 R2 deduplication
- Provides secure and affordable data protection
- Replacador is available as software-only or in storage appliances that include RAID 10 technology

Replacador is the easy-to-use, low cost replication solution for Windows 2012 R2 deduplication. Using Replacador in conjunction with Windows Deduplication, you can affordably and automatically create secure replicated copies of your backups across the internet, on external drives, or in the cloud.

Replacador works with free Windows Deduplication to give you deduplicated and replicated copies of your backups while saving storage space and reducing your reliance on expensive, inconvenient and error-prone tape backups.

Windows 2012 R2 includes the deduplication feature for FREE, allowing you to deduplicate your backups at no additional cost.

Replacador provides the hands-free automated replication for your deduplicated files. Now you can transmit copies of your backup offsite without shipping tapes for disaster recovery protection.

With the space savings of deduplication and the secure functionality of Replacador it becomes easy for you to add multiple local or remote copies of your entire backup set.

ESSENTIALS

- Replicates Windows 2012 R2 deduplicated volumes to the cloud, offsite location or external drive
- Removes need for a dedicated appliance
- Works with virtual and/or physical environments
- Makes replication affordable for your business
- Supports secure offsite storage to the cloud, offsite location, or external drive for disaster recovery
- Low cost of entry & low cost of maintenance

Windows deduplication allows you to store 20 to 50 full backups in the disk space normally required for two or three backups. This saves you storage space and makes it feasible to keep many backup cycles online and readily available.

By reducing the size of each new backup cycle's data footprint to a fraction of the amount taken up by a complete backup, Windows Deduplication allows full backups to be completed each day providing the maximum protection for files.

The easily configurable deduplication process can be run on demand or as a scheduled task after your backup is written to disk, allowing backup jobs to run at full speed.

Replacador replicates only the changes in the deduplicated data making it feasible to replicate backups over the Internet to a safe location, an external disk drive or to the cloud.

Replacador has a low cost of entry and low cost of maintenance.

This makes deduplication with replication an affordable solution for you.

Why buy an expensive dedupe appliance when you can do it yourself with Replacador?

NEW! Replacador now includes an option for Block Differential.

This method will detect changes within modified files and only send the changed bytes to the destination. This method can result in a substantial reduction of the amount of data that has to be transferred over the network.

To discuss your unique system needs and backup requirements, or to receive a quote, [email us](#) or call us at 800-444-6283 or 918-664-7276.

ESSENTIALS

- Works with Veeam, BackupExec, NetBackup, and other backup systems
- Operates as a scheduled task
- Simplifies your backup process
- Eliminates worry over manually making extra copies of your data
- Eliminates the need for a costly dedicated deduplication solution
- No complicated steps or installation
- Backups safely stored available for restores whenever needed

Replacador & Veeam

Replacador can be used with Veeam Backup and Recovery software for virtualized environments to make the Veeam backups even more valuable in safeguarding your systems.

Replacador replicates backups from a Veeam backup repository on a Windows deduplicated volume, across a network to another server or via the Internet to a disaster recovery site for immediate protection. This keeps VM backups safe by sending it automatically to the DR site.

Windows deduplication reduces the backup footprint by a significant amount, and Replacador transmits only the deduplication changes to the remote Windows deduplicated volume.

Veeam includes a limited form of deduplication within a single backup instance, and Windows then deduplicates one backup against all the other backups for even greater savings.

Replacador can be used with other virtual backup solutions; including Symantec's NetBackup and BackupExec.

For further information on using Replacador in virtualized environments, [email us](#) or call us at 800-444-6283.

Replacador Software

Easily install Replacador on any existing Windows server running Windows 2012 or R2.

- Low cost of entry and low maintenance cost
- Higher capacity deduplication at a lower price
- Easy to use, easy to deploy

Replacador is used to replicate backups for:

Electronic Storage Corp.
5127 S. 95th East Ave.
Tulsa, OK 74145 US
